UBS Group AG (UBS) — Bank Valuation, Forecast & Positioning

A global wealth-and-universal-bank deep dive on the framework banks are actually valued on: P/E, P/B, price-to-tangible-book and RoTE. It adds a four-year critical-ratio panel benchmarked to the peer standard deviation, litigation and government-policy risk, and a Wall Street comparison.

Governance & guardrails. Research only, **not investment advice** (Ethics 3.30). **Banks are not valued on EV/EBITDA or ROIC** (deposits are not debt, and net interest income is operating), so this report uses the book-value/returns framework. Market data via yfinance. Regulatory ratios (CET1, LCR, NSFR, cost/income, cost of risk, NPL, RoTE) were collected from company filings by research agents and carry per-bank source links (Appendix C). Litigation, policy and analyst sections reflect sources as of 2026-10-09 and must be re-verified before use. Forecasts are scenario anchors on a near-random-walk series.

EXECUTIVE BRIEF

UBS is priced as if it will hit its ~18% RoCET1 ambition *and* win a soft Swiss capital outcome. On the returns it earns today, it isn't there yet. At 1.75× tangible book, right at the peer median, UBS earns a 13.9% RoTE against a 17.4% peer average. Its cost/income ratio has been 2.2–2.5σ worse than peers for three straight years. Our six bank methods centre on ~$41 (-13%). The Street's ~$54 average needs a ~17% RoTE. The swing factor is Swiss politics, not litigation.

- **Valuation, on the bank lens:** $47.06 = 1.62× book, **1.75× tangible book** (peer median 1.75×), 15.1× trailing and 11.5× forward earnings (+19% vs peers on both). Our six methods give $32–$47, central **$41**, rolling forward to ~$43 in 12 months.

- **Critical ratios, FY2022–FY2025 vs peer σ:** the balance sheet is a clear strength. The going-concern leverage ratio is +0.6σ to +2.9σ, LCR is above the peer mean in every period, and cost of risk (−0.7 to −1.1σ) and NPLs (~−1.2σ) are the lowest in the group. CET1 sits right on the mean (14.4% vs 14.2%). Profitability is the weakness: cost/income has been **+2.2 to +2.5σ worse** than peers since FY2023, and reported RoTE was −1.2σ to −1.3σ in FY2024–25.
- **The trend is improving fast.** Underlying RoTE went 4.1% → 8.5% → 12.1% → 14.4% (H1'26), and cost/income fell from 95% (FY23) to 72.7% (H1'26). The RoTE gap to peers has halved to −0.7σ. FY2023 is distorted by the ~USD 27.7bn negative-goodwill gain (RoTE 41%, P/E 3.6×), so we read it as an outlier.
- **Litigation is shrinking but has two unprovisioned tails.** Provisions are USD 1.96bn (from USD 2.20bn at end-2025 and USD 3.6bn at end-2024), and reasonably possible losses beyond them are USD 0–1.5bn. The Credit Suisse AT1 appeal (CHF 16.5bn face) and the ex-CS shareholders' exchange-ratio appraisal (claims of CHF 7–35bn) sit outside both figures. Each USD 1bn of loss costs ~20bp of CET1.
- **Policy is the dominant driver.** The Council of States voted on 23 Sep 2026 for 90% CET1 backing of foreign subsidiaries, ~USD 16bn of extra CET1 at UBS AG. The National Council decides in December, with law likely in 2027. We estimate a 2.3pp drag on sustainable RoTE and −$2.45/share (−5%) of value at 90%. US capital relief, the OCC charter, tariff de-escalation and Fed hikes are partial offsets.
- **Wall Street vs PRISM:** the Street has 13 Buy / 9 Hold / 3 Sell, with an average target of CHF 44.75 (≈$54, +14%). We agree on earnings (FY26 EPS: ours $3.62 vs consensus $3.64) but disagree on the multiple. The Street's target needs a 17.0% RoTE; our central value implies 13.7%.
- **Financial-statement health check (Addendum):** sound and improving. CET1 held at 14.2–14.4%, LCR stayed above 160% and credit losses were negligible while UBS absorbed Credit Suisse. Normalised net income went USD 1.7bn → 6.3bn → 9.9bn (FY23–FY25). Watch-points are cost efficiency and a FY25 profit flattered by an 11.9% tax rate.
- **Technicals and catalysts:** the price sits exactly on its 200-day average ($47.06), 15.5% below the September high, with RSI 32.8 (near oversold). Next catalysts: 3Q26 results on 28 Oct, the National Council committee on 26–27 Oct, and the plenary in December.

Confidence: MODERATE

1 · Why banks need a different lens, and what's different about UBS

A bank has no meaningful enterprise value or EBITDA. Its deposits are raw material, not leverage, and net interest income is operating revenue. Banks are valued on **earnings (P/E), book value (P/B) and tangible book (P/TBV)**, and on the returns that justify them: **ROE and RoTE**. The central relationship is that **a bank's P/TBV is a function of its RoTE versus its cost of equity**. Two UBS-specific complications follow. First, UBS is half wealth manager, and capital-light wealth franchises earn structurally higher multiples than lending banks. So we benchmark against two lenses: **European universal banks** (Deutsche Bank, BNP Paribas, Barclays, HSBC, Santander, ING, Société Générale) and **global wealth & investment banks** (Morgan Stanley, Goldman Sachs, JPMorgan, Julius Baer). Second, **FY2023 is not a normal year**. The Credit Suisse acquisition (June 2023) produced a ~USD 27.7bn negative-goodwill gain that inflates every FY2023 return and payout ratio. We show it, flag it, and read underlying figures alongside.

2 · Where UBS trades vs. peers

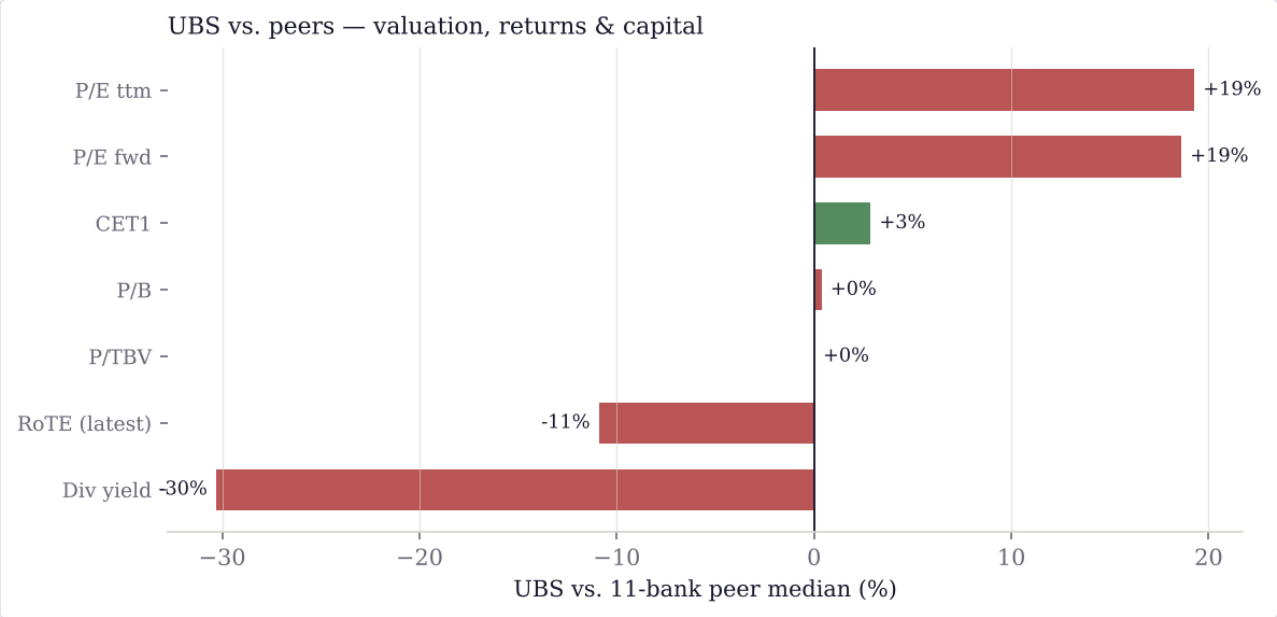

Fig. 1. UBS vs. the 11-bank peer median. Red = more expensive multiple or weaker metric; green = cheaper multiple, higher returns or capital.

Metric	UBS	Peer median	Read
P/E trailing (TTM)	15.1	12.7	+19% expensive
P/E forward (yfinance basis)	11.5	9.7	+19% expensive
P/B	1.62	1.61	in line
P/TBV	1.75	1.75	in line
RoTE, latest run-rate %	13.9	15.6	-11% lower
CET1 ratio %	14.4	14.0	in line
Dividend yield % (TTM)	2.34	3.36	-30% lower

Table 1 — UBS vs. peer median (balance sheets at 30 Jun 2026; prices 8 Oct 2026).

Bank	Lens	P/E ttm	P/E fwd	P/B	P/TBV	RoTE %	CET1 %	Div yld %
UBS ●	Subject	15.1	11.5	1.62	1.75	13.9	14.4	2.34
Deutsche Bank	EU universal	8.8	7.9	0.72	0.80	11.9	13.9	3.31
BNP Paribas	EU universal	8.0	6.8	0.75	0.82	13.3	13.0	9.29
Barclays	EU universal	8.5	6.7	0.73	0.83	14.8	14.3	3.36
HSBC	EU universal	13.1	9.7	1.61	1.72	18.2	14.1	4.50
Santander	EU universal	10.7	9.6	1.59	1.92	15.6	14.0	1.98
ING	EU universal	12.7	10.1	1.69	1.75	14.5	13.1	5.58
Société Générale	EU universal	8.3	6.9	0.65	0.73	12.0	13.2	3.73
Morgan Stanley	Wealth & IB	15.1	13.8	2.77	3.52	26.8	14.9	2.21
Goldman Sachs	Wealth & IB	12.8	12.2	2.34	2.56	23.4	12.9	2.04
Julius Baer	Wealth & IB	19.1	11.4	2.02	3.18	20.6	18.5	7.30
JPMorgan	Wealth & IB	13.8	13.2	2.49	3.05	23.0	14.2	1.86

Table 2 — the comp set (● = UBS). RoTE = latest reported run-rate (H1'26 or annualised 2Q26; JPM ex-significant items; Santander underlying; Julius Baer FY25, so the peer mean of 17.4% used elsewhere excludes it). P/E fwd = yfinance next-year consensus.

3 · Fair value — six bank methods

Method	Inputs	Implied	vs $47
Peer-median forward P/E × UBS forward EPS	9.7× × $4.08	$40	-16%
Peer-median P/B × book value/share	1.61× × $29.12	$47	-0%
Peer-median P/TBV × tangible book/share	1.75× × $26.89	$47	+0%
RoTE regression — all 11 peers	fair 1.19× at RoTE 13.9%	$32	-32%
RoTE regression — mix-adjusted (wealth franchise)	fair 1.48× (50% wealth weight)	$40	-15%
Justified P/TBV = (RoTE − g)/(CoE − g), base	RoTE 14%, CoE 10%, g 3% → 1.57×	$42	-10%
PRISM central fair value (median of six)	**range $32–$47**	**$41**	**-13%**
12-month roll-forward (tangible book accretes 5.2%)	RoTE 13.5% × retention after 62% payout	$43	-8%

Table 3 — implied UBS share price (USD) from each method.

The tension is the story. On the simple peer multiples (P/B, P/TBV), UBS looks fairly valued at ~$47, because it trades exactly at the 11-bank median. But that median blends 3×+ wealth franchises (MS, JPM, Julius Baer) with sub-1× European universals, and UBS's returns sit below it. Pricing UBS on what it earns (a 13.9% run-rate RoTE) gives $32 on the all-peer regression. Giving UBS half credit for its wealth franchise lifts that to $40. On a cost-of-equity basis (CoE 10%, g 3%, RoTE 14%), it is $42. Today's $47 requires the market to believe in a ~15.3% sustainable RoTE. That is achievable only if management delivers its 2028 ambition and the Swiss capital outcome is benign.

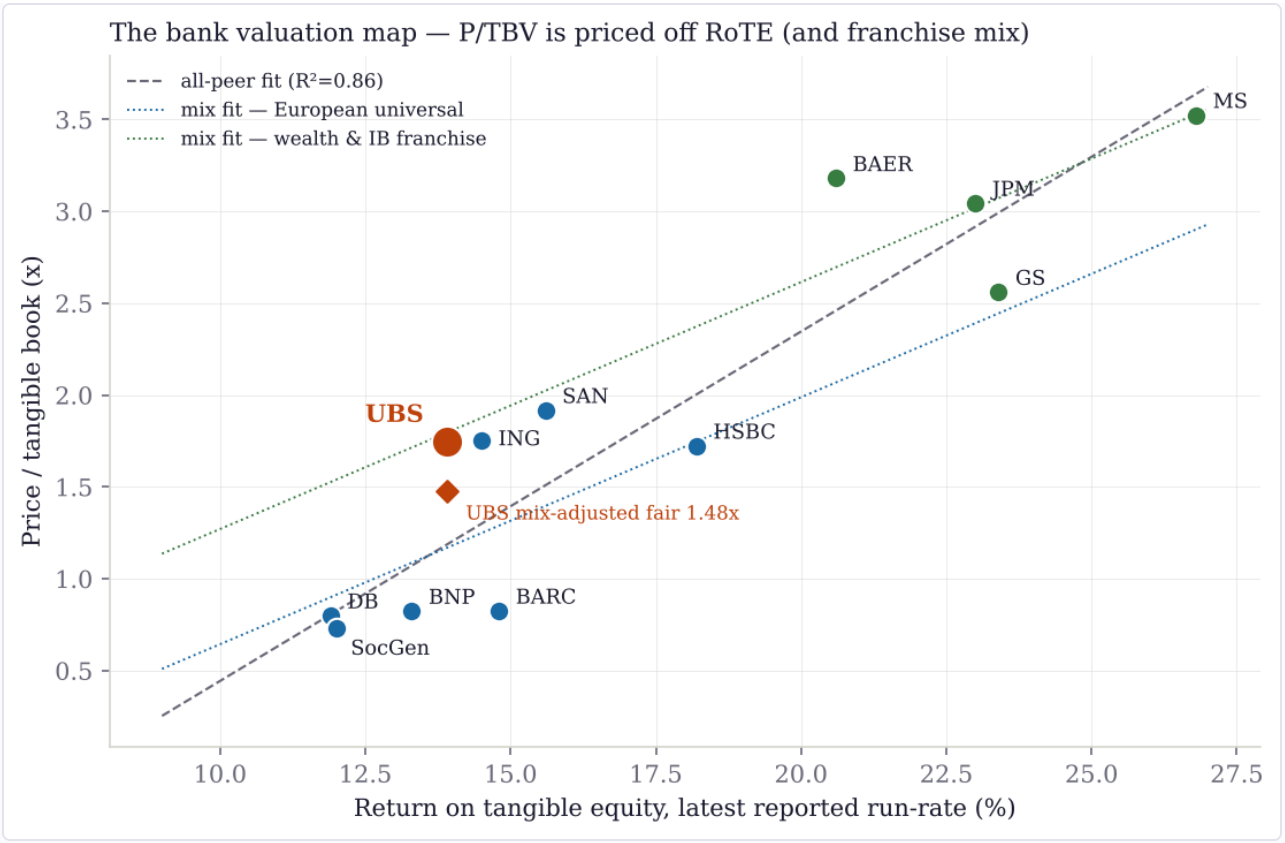

Fig. 2. The bank valuation map. On the all-peer line (R^2=0.86) UBS sits +0.56× above fair. After the wealth-franchise adjustment (dotted lines; R^2=0.88) the premium shrinks to +0.27×. Either way, the market is paying for future RoTE, not current RoTE.

RoTE ↓ / CoE →	9.0%	9.5%	10.0%	10.5%	11.0%
11%	$36	$33	$31	$29	$27
12%	$40	$37	$35	$32	$30
13%	**$45**	$41	$38	$36	$34
14%	**$49**	**$46**	$42	$39	$37
15%	$54	$50	**$46**	$43	$40
16%	$58	$54	$50	**$47**	$44
17%	$63	$58	$54	$50	**$47**
18%	$67	$62	$58	$54	$50

Table 4 — justified-P/TBV sensitivity: implied price (USD) by sustainable RoTE (rows) and cost of equity (columns), g = 3%, TBVPS $26.89. Shaded cells are within ±5% of today's price. CAPM cross-check: rf 5.24% + β 0.85 × 5% ERP = 9.5%.

3a · Historical multiples vs. the industry (FY2022–FY2025)

On book-value measures UBS traded in line with the peer *mean* through FY2022–FY2025 (P/TBV within ±0.15σ every year) but 18–53% above the peer *median*, which is pulled down by the sub-1×

European universals. P/E is the outlier: it was depressed to 3.6× in FY2023 by the negative-goodwill gain, then inflated to 18–19× in FY2024–25 (+1.8σ to +2.7σ) as integration costs crushed reported earnings. That is a high P/E on depressed EPS, not a richness signal. The market has kept paying an average-peer multiple on book throughout, effectively looking through the integration to normalised returns.

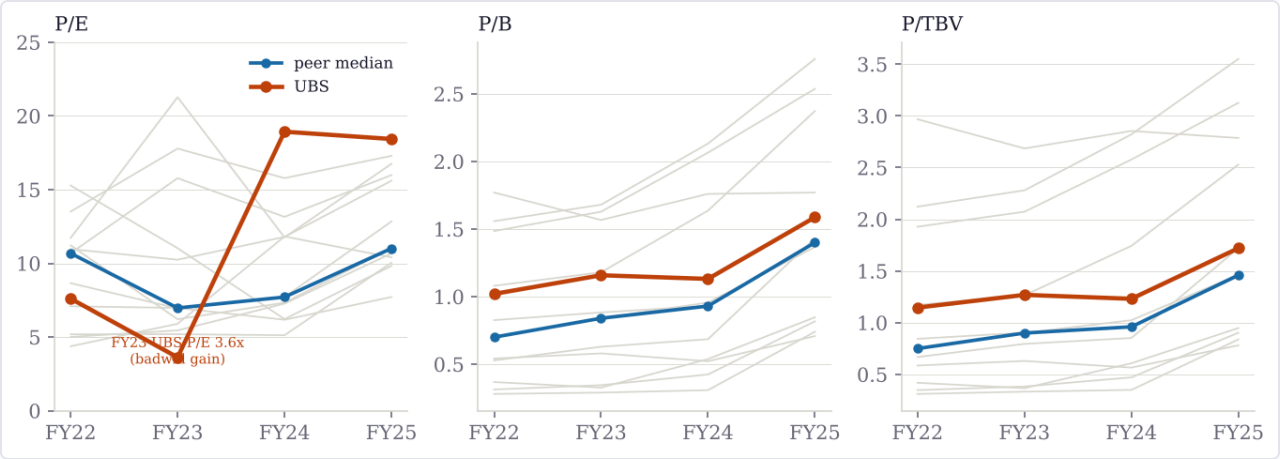

Fig. 3. UBS (orange) vs. peer median (blue) and every individual peer (grey) on P/E, P/B and P/TBV at fiscal year-end, FY2022–FY2025.

FY	UBS P/E	Peer P/E	UBS P/B	Peer P/B	UBS P/TBV	Peer P/TBV
FY2022	7.6	10.7	1.02	0.70	1.15	0.75
FY2023	3.6	7.0	1.16	0.84	1.27	0.90
FY2024	18.9	7.7	1.13	0.93	1.23	0.96
FY2025	18.4	11.0	1.59	1.40	1.72	1.46

Table 5 — UBS vs. peer-median multiples by fiscal year (year-end prices, reported-currency book values).

4 · Critical financial ratios: four-year trend vs. the peer standard deviation

NEW

We track **22 ratios** across five families (profitability, capital, liquidity & funding, asset quality, valuation & shareholder returns) for UBS and all 11 peers, FY2022–FY2025, plus the latest reported period (H1'26) where filings allow. For each ratio and year we compute the peer mean and sample standard deviation (σ, n = 10–11), then UBS's **z-score = (UBS − peer mean) / σ**. A |z| above 1 means UBS sits outside the middle ~two-thirds of the peer distribution; above 2 makes it a genuine outlier. Ratios marked R are as reported in company filings; C are computed from standardised statements.

Fig. 4. UBS (orange) vs. peer mean (blue dashed) with ±1σ (dark band) and ±2σ (light band), FY2022–FY2025 and H1'26. The RoTE panel also shows UBS's underlying RoTE (dotted). Reported FY23 RoTE (41%) is off-scale

because of the negative-goodwill gain.

UBS z-score vs. peer distribution (z = (UBS − peer mean) / peer σ)
green = better than peers, red = worse; grey rows are descriptive (no 'better' direction)

	FY22	FY23	FY24	FY25	H1'26

Fig. 5. UBS z-score heatmap. Colour is oriented so green always means "better than peers" (e.g. a low cost/income ratio or low cost of risk is green). Descriptive ratios with no better/worse direction are grey.

What the four-year panel says.

- **Profitability is the persistent weakness, and it's improving.** Cost/income has been +2.2σ to +2.5σ above the peer mean every year since FY2023 (81.1% vs 59.6% in FY25). Reported RoTE was −1.2σ (FY24) and −1.3σ (FY25). Both are integration effects layered on a structurally higher-cost wealth model. By H1'26 the RoTE gap has narrowed to −0.7σ (13.9% vs 17.4%), with underlying RoTE at 14.4%.
- **Capital is average; leverage and liquidity are strong.** CET1 sits within ±0.4σ of the mean every year (14.2–14.4%), consistent with UBS's ~14% target, so there is *no excess capital cushion* ahead of the Swiss reform. The going-concern leverage ratio has risen from +0.6–1.1σ (FY22–23) to +2.9σ (H1'26) as peers' ratios fell. LCR beat the peer mean every year (177–216%). NSFR has drifted slightly below the mean (−0.7σ).
- **Asset quality is best-in-class.** Cost of risk ran 1–19bp vs a 40–53bp peer mean (−0.7σ to −1.1σ), and the NPL ratio ~1% vs ~2% (−0.9σ to −1.3σ). This reflects a Lombard and Swiss-mortgage book rather than consumer or corporate lending.
- **Business mix shows up in the balance-sheet ratios.** NII/assets is ~1σ below peers in every year (0.4–0.6% vs ~1.1%): UBS earns fees, not spread. The loan-to-deposit ratio has crept up (73.7% → 84.5%, now +0.7σ) as CS lending was absorbed.
- **Shareholder returns lag on yield but not on payout.** Dividend yield is −0.8σ to −1.4σ, while total payout (dividends plus buybacks) is at or above the mean except in FY2023. The market is paying a peer multiple for a lower cash yield, betting on growth in capital returns that the Swiss reform now threatens.

Table 6 — the full ratio panel. Each cell shows UBS (bold) above the peer mean ± σ, with the z-score alongside (green = favourable at |z|≥1, red = unfavourable). FY2023 UBS returns and payout include the CS negative-goodwill gain. Leverage for UBS is the Swiss going-concern ratio (closest to peers' Tier-1 leverage).

5 · What is driving UBS

UBS is now the world's largest wealth manager (≈USD 7.3tn of invested assets) bolted to a Swiss universal bank, an asset manager and a deliberately capital-light investment bank. The share-price recovery since 2023 is an integration story. UBS has delivered USD 12.6bn of its ~USD 13.5bn gross cost-save target. Underlying RoCET1 reached 16.7% in H1'26, already above the ~15% end-2026 target, and Non-core & Legacy is being run down. Earnings momentum in 2026 has been helped by strong markets: a record Investment Bank quarter in 2Q26, wealth net new assets of USD 72.9bn in H1, and higher USD rates lifting GWM net interest income (guided ~+10% for FY26). Capital return is the other leg. UBS paid a USD 1.10 dividend for FY25, is accruing for mid-teens DPS growth and is running a new USD 3bn buyback to mid-2027. That buyback is explicitly conditional on visibility from the Swiss parliament.

6 · Headwinds

Swiss capital regime: this is the overhang that defines the stock. Every outcome between 75% and 100% backing traps USD 8–20bn of CET1 at the parent bank over a seven-year phase-in, diluting returns and capping buybacks. **Cost efficiency:** even after the integration savings, UBS's cost/income ratio (72.7% in H1'26) is ~17pp above the peer mean. That gap is structural, coming from the wealth mix, adviser pay in the US and the Swiss cost base, and only part of it will close. **Earnings quality:** analysts flag that the 2Q26 beat came from investment-bank trading that won't recur, and management has guided 3Q26 below a strong 3Q25. **US wealth attrition** and recidivist AML status at UBS Financial Services add friction. **Legal tails** from the Credit Suisse estate (AT1, the appraisal suit, US class actions) are unprovisioned and long-dated. **FX:** UBS reports in USD on a CHF-heavy cost base, so CHF strength would hurt cost/income.

7 · Ongoing lawsuits & legal contingencies NEW

UBS's disclosed legal book is shrinking quickly. At 30 Jun 2026, IAS 37 litigation provisions were **USD 1.96bn**, down from USD 2.20bn at end-2025 and USD 3.60bn at end-2024. A further USD 0.32bn of acquisition-related contingent liabilities sits on top, and USD 1.35bn of provisions are in Non-core & Legacy. UBS estimates **reasonably possible losses beyond provisions at USD 0–1.5bn**. Several matters were settled in 2025–26: the French tax case (EUR 835m), the CS US tax plea (USD 511m) and RMBS consumer relief (USD 300m). **The material risks sit outside both figures.** The CHF 16.5bn AT1 write-down appeal and the ex-CS shareholders' exchange-ratio appraisal are neither itemised nor provisioned. With CET1 capital of USD 72.5bn, each USD 1bn of unprovisioned loss costs ~20bp of CET1 (~$0.33/share).

Matter / forum	Status	Exposure & provision	Impact
Credit Suisse AT1 write-down (CHF ~16.5bn) Swiss Federal Supreme Court (appeal of Oct-2025 Federal Administrative Court ruling)	Lower court found the write-down lacked a legal basis and revoked FINMA's decree, but ordered no reinstatement or compensation; FINMA and UBS appealed; Supreme Court granted suspensive effect 10 Dec 2025; ~360 parallel cases suspended; no merits ruling as of 9 Oct 2026.	Face ~USD 20bn; not provisioned (UBS: 'no liability'); who pays (UBS vs Confederation) unresolved. Full hit ≈ 350–400bp CET1.	High
Ex-CS shareholders' exchange-ratio appraisal (Art. 105 Merger Act) Zurich Commercial Court	Court-appointed experts instructed Feb 2026 to value CS as a going concern at 19 Mar 2023; plaintiffs got full access to UBS valuation papers; first-instance ruling not before 2027.	Dispute value CHF 50bn (procedural); plaintiffs' valuation implies CHF 7–35bn claim vs ~CHF 3bn paid. Not provisioned. CHF 2–5bn ≈ 50–120bp CET1.	High
US CS securities & AT1 class actions SDNY (Diabat / Core Capital; Palomino)	Classes certified; discovery ongoing (update due 2 Nov 2026); in-camera review of FINMA-protected documents moving forward.	Not quantified; within USD 0–1.5bn reasonably-possible range. Mid-hundreds of millions ≈ 5–15bp.	Medium
Legacy CS RMBS repurchase suits New York State courts	USD 300m DOJ consumer-relief resolution (Aug 2025); three DLJ repurchase actions remain.	~USD 1.3bn claimed principal; Non-core & Legacy holds USD 1.35bn of provisions.	Medium
Ivanishvili / Lescaudron fraud damages Bermuda (Privy Council), Geneva	Privy Council (24 Nov 2025) upheld liability; damages being recalculated; USD 607m award + interest in escrow.	Largely pre-funded; incremental P&L ± tens to low hundreds of USD m.	Medium
US AML / BSA — UBS Financial Services FinCEN, SEC, FINRA, CFTC	Resolved 3 Aug 2026; willful BSA violations admitted; independent consultants; treated as a recidivist.	USD 125m total; raises the bar on future US AML compliance.	Low
French cross-border tax case Paris Court of Appeal remand	Settled 23 Sep 2025.	EUR 835m paid; excess provision released in 3Q25. Closed.	Low
CS US tax-evasion plea (2025) US DOJ / EDVA	Resolved 5 May 2025; ongoing DOJ cooperation duties.	USD 511m paid; breach of the agreements is the residual tail.	Low
Mozambique 'tuna bonds' & Bulgarian AML cases Swiss Federal Criminal Court	Mozambique charges vs UBS dismissed 8 Apr 2026 (no successor criminal liability; OAG appealing); Bulgarian case acquittal confirmed Mar 2026.	Immaterial financially; precedent favourable to UBS.	Low

CS Nazi-era accounts (US Senate probe) US Senate Judiciary; EDNY	Judge declined (Apr 2026) to confirm the 1999 settlement covers newly found accounts; Senate questions continue.	No suits filed; mainly reputational.	Low
Archegos derivative suit NY Supreme Court	USD 115m settlement paid by D&O insurers to UBS; final judgment 17 Jul 2026.	Small gain in 2H26.	Low

Table 7 — material legal matters (status as of 9 Oct 2026). Impact rating is analyst judgement of potential effect on earnings, capital or valuation. Sources in Appendix C.

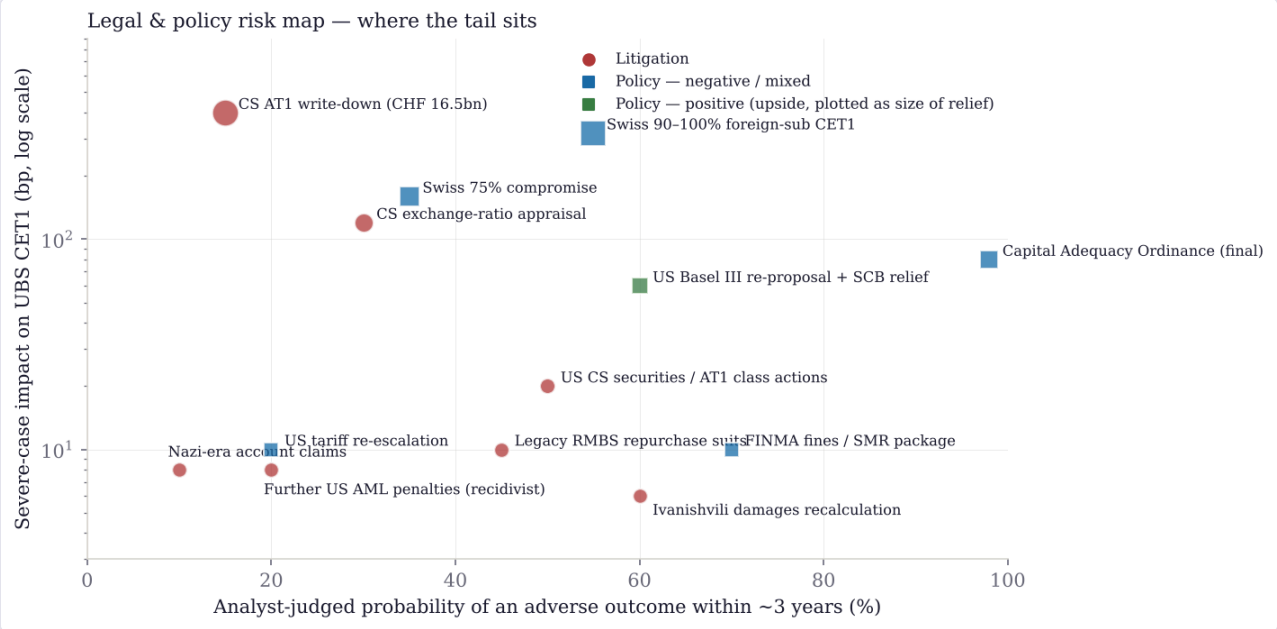

Fig. 6. Legal and policy risk map: analyst-judged probability of an adverse outcome within ~3 years vs. the severe-case capital impact (bp of CET1 / RWA, log scale). Two items dominate the top: the AT1 ruling (low probability, very high impact) and the Swiss capital reform (high probability, high impact). Placements are judgement, not model outputs.

How litigation feeds the valuation. We do not deduct a litigation charge from the central fair value, because no court has ruled against UBS on either tail. A probability-weighted view does matter, though. Using our risk-map placements, the expected cost is ~15% × USD 20bn (AT1, if UBS bore it fully) + ~30% × ~USD 4bn (appraisal) ≈ USD 4bn, or ~$1.40 per share (~3% of the price). That is roughly half the 90%-scenario capital drag below. Neither is likely to crystallise before 2027.

8 · Government policy & regulatory shifts NEW

Swiss capital policy dominates the UBS investment case. On **22 Apr 2026** the Federal Council sent Parliament a bill requiring UBS AG to back its foreign subsidiaries with 100% CET1, phased in over seven years from 65% (versus ~60%, part-AT1, today). On **23 Sep 2026** the Council of States voted 29–16 for **90%**, rejecting both its committee's 50%-CET1-plus-AT1 compromise and, by 23–

22, the government's 100%. The bill now goes to the National Council: committee hearings on 26–27 Oct, then the December plenary, where a 75% compromise is circulating. Final law is unlikely before 2027, and a referendum is possible. Outside Switzerland the policy backdrop is net positive.

Policy	Status	Estimated effect on UBS	Direction
Swiss TBTF reform — CET1 backing of foreign subsidiaries Switzerland	Federal Council bill (22 Apr 2026): 100%, 7-yr phase-in. Council of States (23 Sep 2026) voted 90%. National Council committee 26–27 Oct; plenary Dec 2026; 75% compromise circulating; referendum possible; law 2027+.	~USD 16bn extra CET1 at 90% (~USD 20bn at 100%) at UBS AG; ~2–3pp drag on sustainable RoCET1; USD 3bn buyback explicitly conditional.	Negative
Capital Adequacy Ordinance amendments Switzerland	Adopted 22 Apr 2026 (final). Prudential valuation from 1 Jan 2027; software amortisation by 2029. DTA deduction and AT1 changes shelved (DTA kept 'in reserve').	~USD 4bn group CET1 (~0.8pp), phased 2027–29.	Negative
TBTF package II — FINMA fines, senior-managers regime, pay clawback, liquidity pre-positioning Switzerland	Consultation 12 Aug–19 Nov 2026; dispatch 2027; effect likely 2028+.	Not quantified; compliance cost, new fine risk, modest liquidity drag.	Negative
SNB policy rate held at 0% Switzerland	Held 24 Sep 2026; negative-rate risk receding; next decision 10 Dec 2026.	+100bp parallel ≈ +USD 1.5bn NII (USD 1.2bn from CHF).	Mixed
US Basel III re-proposal; SCB for UBS Americas United States	Re-proposals 19 Mar 2026 (Cat. I–II CET1 −4.8%); 2026 stress drawdown 2.8% vs 5.2%; SCB frozen until 2027.	Potential multi-bn USD capital release from the US IHC from 2027 — the main mitigant to the Swiss rule.	Positive
OCC national bank charter (UBS US bank) United States	Final approval 20 Mar 2026; full product rollout 2H 2027.	Supports US deposit gathering and lending to ~USD 2.4tn Americas wealth clients.	Positive
US tariffs on Swiss goods United States / Switzerland	39% (Aug 2025) → 15% framework (Nov 2025) → ≤12.5% Section 301 tariff since 24 Jul 2026.	Lower Swiss credit and SNB-easing risk; small positive.	Positive
Fed and ECB hikes (Sep 2026) US / Euro area	Fed 3.75–4.00% (16 Sep 2026); ECB 2.50%.	Supports USD deposit margins; UBS guides GWM NII ~+10% in FY26.	Positive
EU CRR3 / FRTB and UK Basel 3.1 EU / UK	FRTB from 1 Jan 2027 with 3-yr relief; UK Basel 3.1 1 Jan 2027.	UBS expects limited impact.	Mixed
Swiss AML Act & beneficial-ownership register Switzerland	In force 1 Oct 2026; FINMA ordinance 1 Jan 2027.	Small compliance cost.	Negative

Table 8 — policy and regulatory shifts with potential to move UBS results or valuation. Sources in Appendix C.

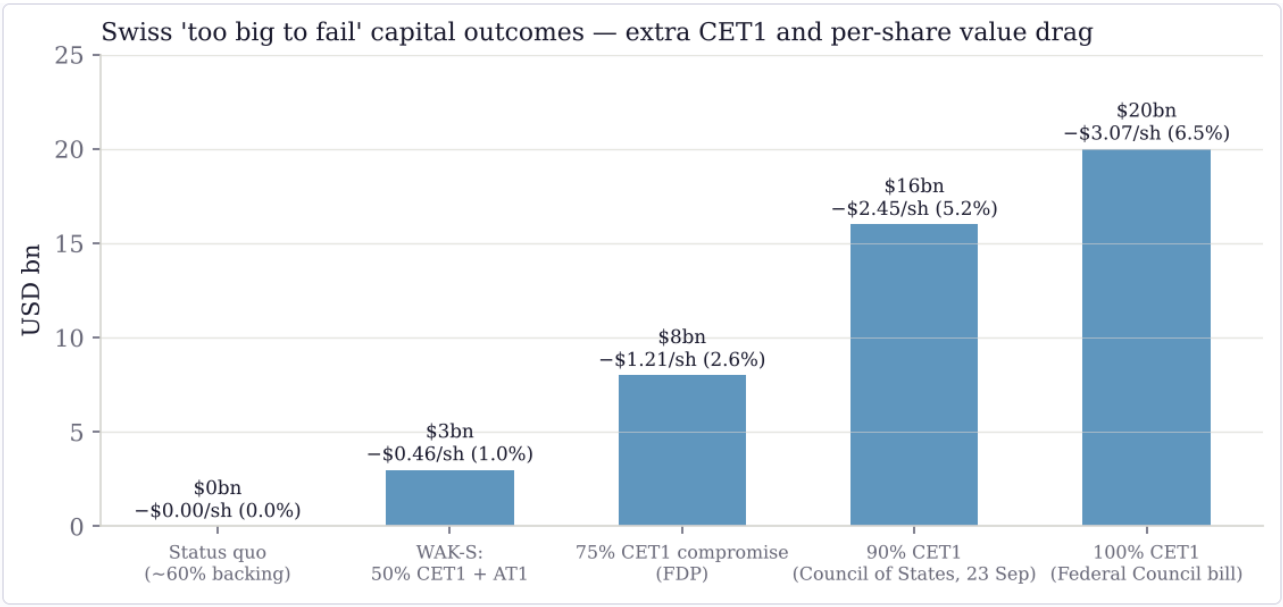

Fig. 7. Swiss capital outcomes: extra CET1 required at UBS AG and our per-share value drag. Drag = extra capital × (CoE − 3.5% after-tax yield on trapped capital) / CoE × 0.72 phase-in present-value factor. The already-final ordinance changes (~USD 4bn group CET1) apply in every scenario.

Outcome	Extra CET1	RoTE drag	Value / share	% of price	Basis
Status quo (~60% backing)	$0bn	0.0pp	−$0.00	−0.0%	current rules
WAK-S: 50% CET1 + AT1	$3bn	−0.5pp	−$0.46	−1.0%	estimate (AT1 substitution) — not company-quantified
75% CET1 compromise (FDP)	$8bn	−1.2pp	−$1.21	−2.6%	PRISM linear interpolation (60% today = 0; 90% = USD 16bn)
90% CET1 (Council of States, 23 Sep)	$16bn	−2.3pp	−$2.45	−5.2%	UBS estimate (Swissinfo/UBS, Sep 2026)
100% CET1 (Federal Council bill)	$20bn	−2.7pp	−$3.07	−6.5%	UBS / Federal Council (Apr 2026)

Table 9 — capital-regime scenarios. RoTE drag assumes a 14% RoTE base diluted by the additional equity.

The per-share drag looks modest (≤7%) because the capital is not destroyed, only trapped and phased in. The bigger valuation channel is the **multiple**: a 2.3–2.7pp lower sustainable RoTE moves the justified P/TBV by ~0.3–0.4× (≈ $9–10 per share at a 10% CoE). That is why the stock reacts to each parliamentary step far more than the mechanical capital cost implies. The partial offsets are US: the 2026 stress test cut UBS Americas' drawdown to 2.8% (from 5.2%), and the Basel III re-proposal lowers requirements. Together they could free US-subsidiary capital from 2027, which both funds buybacks and shrinks the participation that Switzerland requires to be backed.

9 · What Wall Street says, and how our figures compare NEW

The Street is split but leans positive: **13 Buy, 9 Hold, 3 Sell** across 25 analysts (aktien.guide, 9 Oct). The average SIX target is **CHF 44.75** (MarketScreener, 17 analysts; full range ~CHF 34–60, high Jefferies; the latest per-broker targets we tracked span CHF 38.5–60), ≈ **$54** per ADR at the 8 Oct CHF/USD (1.2005), or +14%. TipRanks' ADR average is $57.31 (8 analysts, 3 months). **Bulls** (JPMorgan, BofA, Jefferies, Deutsche Bank, RBC, Kepler) cite a near-complete CS integration, RoCET1 already above target, EPS upgrades, the wealth franchise and a ~30% discount to peers. **Bears and neutrals** (KBW Underperform, Morgan Stanley Underweight, AlphaValue Reduce, Vontobel, ZKB, Citi, Goldman, Barclays) cite full valuation after the rally, non-recurring trading-driven beats, US wealth attrition and, above all, the capital regime. The SIX line traded at CHF 39.88 intraday on 9 Oct (+2.7%); all comparisons here use aligned 8 Oct closes. Last quarter (2Q26, 29 Jul), net profit of USD 2.80bn beat the USD 2.39bn company-compiled consensus by ~17%. 3Q26 results are due **28 Oct**, with management cautioning that 3Q26 is unlikely to match an unusually strong 3Q25.

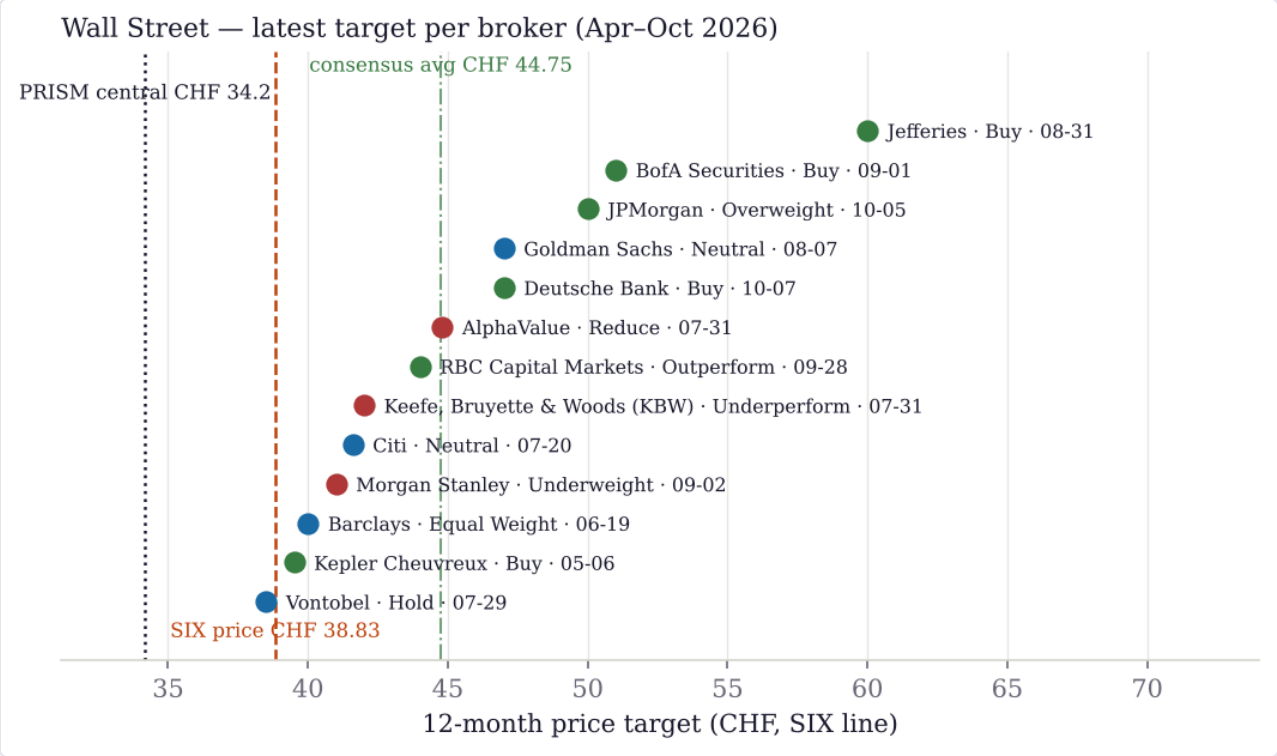

Fig. 8. Latest 12-month target per broker (CHF), coloured by rating (green Buy/Overweight, blue Neutral/Hold, red Underweight/Sell), vs. the SIX price, the consensus average and the PRISM central value converted to CHF. Three targets (Citi, Morgan Stanley, BofA) are back-calculated from TipRanks USD figures and are unverified.

Date	Firm	Rating	Target	Rationale (as reported)
2026-10-07	Deutsche Bank	Buy (reiterated)	45→47	Expects Q3 PBT up ~23% y/y; sees higher ROE potential in 2027 once CS integration completes; planned Swiss regulatory measures flagged as a burden.
2026-10-05	JPMorgan	Overweight (reiterated; Analyst Focus List)	50	Model update ahead of 28 Oct Q3 results; minor changes to adjusted EPS.
2026-09-28	RBC Capital Markets	Outperform (reiterated)	44	Reiteration (also 1 & 21 Sep); no new rationale published in sources found.
2026-09-07	JPMorgan	Overweight	46→50	Raised adjusted EPS through 2028; rising markets help wealth management; higher multiples as CS integration goes well. On Analyst Focus List and European banks Top Pic...
2026-09-02	Morgan Stanley	Underweight (reiterated)	40→41	UNVERIFIED target: CHF values back-calculated from TipRanks USD figures ($47.96→$49.16). Long-standing bear case (since Jun 2025 downgrade): capital overhang limit...
2026-09-01	BofA Securities	Buy	50→51	Target UNVERIFIED (TipRanks shows $61.15 ~ CHF 51). On 6 Jul BofA (CHF 50, Buy, European Top Pick) expected USD 6bn buybacks in 2026, a parliamentary compromise, and c...
2026-08-31	Jefferies	Buy	60	Street-high. Upper-house committee (WAK-S) proposal far milder than Federal Council; focus to shift from capital uncertainty to improving capital returns. (Raised 55-&...
2026-08-18	JPMorgan	Overweight	46	Worst case ~USD 8bn extra capital needed to meet required CET1; integration ahead of plan supports capital generation; ~30% valuation discount to peers could narrow wi...
2026-08-07	Goldman Sachs	Neutral	41.5→47	Estimates updated for Q2; valuation rolled forward and higher multiple applied. (GS downgraded Buy→Neutral on 6 Feb 2026.)
2026-08-04	RBC Capital Markets	Outperform	40→44	Strong capital-markets business in Q2; progress on structural factors.
2026-08-04	LBBW	Buy → Hold (downgrade)	—	Rationale and target not found.
2026-07-31	Keefe, Bruyette & Woods (KBW)	Underperform	40→42	Raised after strong Q2. KBW had said results mostly expected, expectations had risen sharply, stock highly valued, little room to lift own forecasts.
2026-07-31	JPMorgan	Overweight	44→46	Post-Q2 raise (detailed rationale not reported). Earlier (6-28 Jul): strong organic capital generation, leading global WM franchise, cheaper than Morgan Stanley; UBS r...

2026-07-31	AlphaValue	Reduce	44.8	Said it would revisit estimates 'under positive signs' after Q2.
2026-07-29	Vontobel	Hold	38.5	Q2 beat 'not of high quality' - driven by IB trading; other three divisions only ~2% above consensus. (Raised to 38.50 by 7 Jul on higher AuM-driven EPS 2026...
2026-07-29	Zuercher Kantonalbank (ZKB)	Marktgewichten (Market Weight)	—	Very good quarter but IB strength not recurring; no outflows in Americas NNA a positive; shares fairly valued. On 22 Sep: a 50/50 CET1/AT1 solution would avoid worst c...
2026-07-20	Citi	Neutral	36.4→41.6	UNVERIFIED new target: back-calculated from TipRanks USD ($43.64→$49.88). Citi raised 33->36.40 on ~8 May (verified); Neutral reflects unresolved capital-rule a...
2026-06-29	Deutsche Bank	Buy	40→45	CS integration delivering; refocus on core business; rising return on capital; expects UBS to defend post-merger market share.
2026-06-19	Barclays	Equal Weight	35→40	Favourable market environment and improving regulatory backdrop, but valuation now appropriate.
2026-06-19	Keefe, Bruyette & Woods (KBW)	Market Perform → Underperform (downgrade)	36→38	Conditions so favourable that risk of disappointing expectations has risen; little room for upside surprises.
2026-05-06	Kepler Cheuvreux	Buy	39→39.5	Raised earnings estimates by up to 4.5% after Q1.
2026-04-20	Barclays	Underweight → Equal Weight (upgrade)	33→34	Better risk-reward; CS integration risks have fallen; less demanding valuation after share-price fall. Not Overweight because of foreign-sub capital uncertainty, AT1 l...

Table 10 — broker actions, Apr–Oct 2026 (targets in CHF).

Item	Wall Street	PRISM (this report)	Read
12-month value	CHF 44.75 avg ≈ **$54** (median CHF 44; range CHF 38.5–60)	Central **$41** today; **$43** in 12 months (range $32–$47)	**PRISM ~20% below Street**
Implied return vs $47.06	+14%	-8% (12m) plus ~2.7% dividend	Street says modest upside; PRISM says modest downside
Rating skew	13 Buy / 9 Hold / 3 Sell (25 analysts)	Equivalent to **Hold / Underweight** on fundamentals; constructive only if the capital outcome is ≤75%	PRISM sits below every current broker target, including the bears (KBW CHF 42, MS ~41)
FY2026 EPS	$3.64 (17 analysts; range $3.42–3.83)	$3.62 (H1'26 × FY25 H2/H1 seasonality)	**In line — the disagreement is not about earnings**
FY2027 EPS	$4.24	No separate PRISM FY27 estimate; comps use the yfinance +1y consensus ($4.08) for all banks	Street assumes ~+16% EPS growth on cost saves
RoTE the price requires	Street target needs **17.0%**	Today's price needs 15.3%; PRISM central = 13.7% (vs 13.9% H1'26 run-rate)	The gap is ~3pp of RoTE — roughly the size of the Swiss capital drag
Swiss capital outcome	Bulls: compromise, worst case	55% weight on ≥90% (~USD 16–	Main source of disagreement

	'mid-single-digit bn' (Jefferies) / ~USD 8bn (JPM)	20bn at UBS AG); value drag $2.45–3.07/share	
Valuation vs peers	JPM: ~30% discount to peers	At the 11-bank median on P/B and P/TBV, +19% on P/E; rich vs. RoTE regression	Depends on peer set — vs MS/JPM UBS is cheap; vs EU banks it is expensive
Probability price ≥ Street avg in 12m	—	~31% (driftless bootstrap Monte Carlo)	Street target sits near the 70th percentile of a no-drift distribution

Table 11 — Wall Street vs. PRISM, side by side.

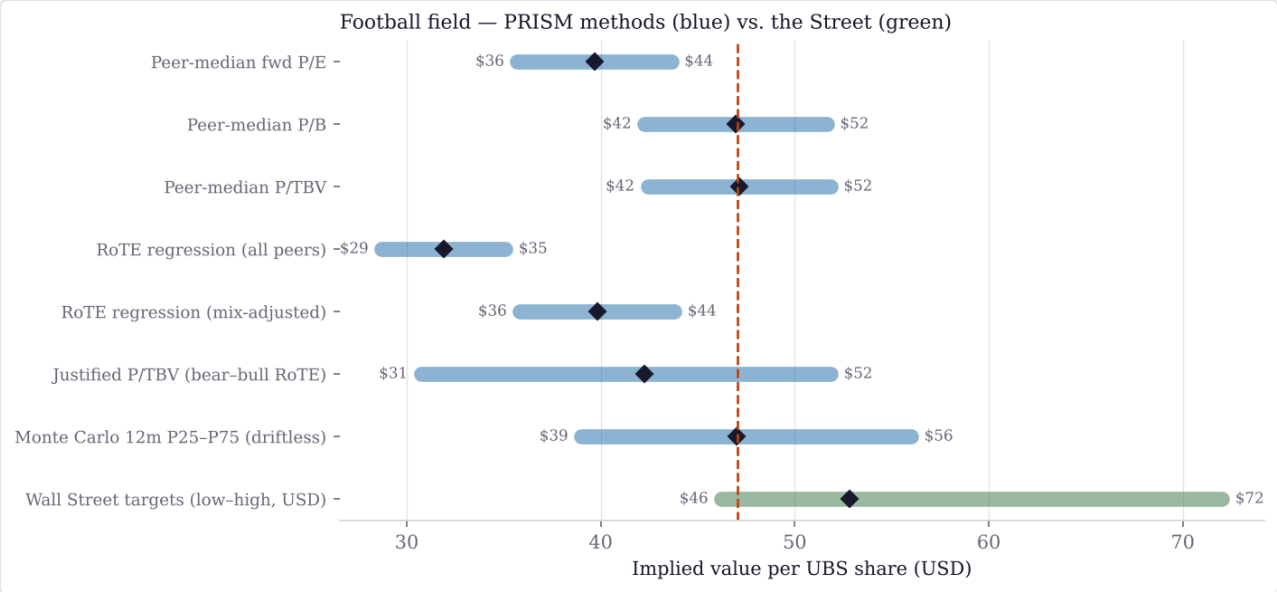

Fig. 9. Football field. PRISM methods (blue, ±10% bands on point estimates) vs. the range of current broker targets (green, converted to USD). The Street range sits almost entirely above both today's price and every fundamental method except peer P/B and P/TBV.

Reconciling the gap. We do not disagree with the Street on near-term earnings. Our FY26 run-rate EPS ($3.62) is within 1% of consensus. The gap is the multiple and what drives it. To reach ~$54 on a 10% cost of equity, UBS must sustain a ~17.0% RoTE, essentially management's exit-2028 ~18% RoCET1 ambition translated to tangible equity, *and* keep it there after the Swiss reform. Our base case gives it 14%: the ambition, less the ~2.3pp drag of a 90% rule, less some normalisation in trading. If the National Council lands on 75% or an AT1-inclusive deal, our central value rises

toward ~$45–47 and the gap to the Street halves. If 90–100% stands, we see the bear-case justified value ($31) as the downside anchor.

10 · Technical read

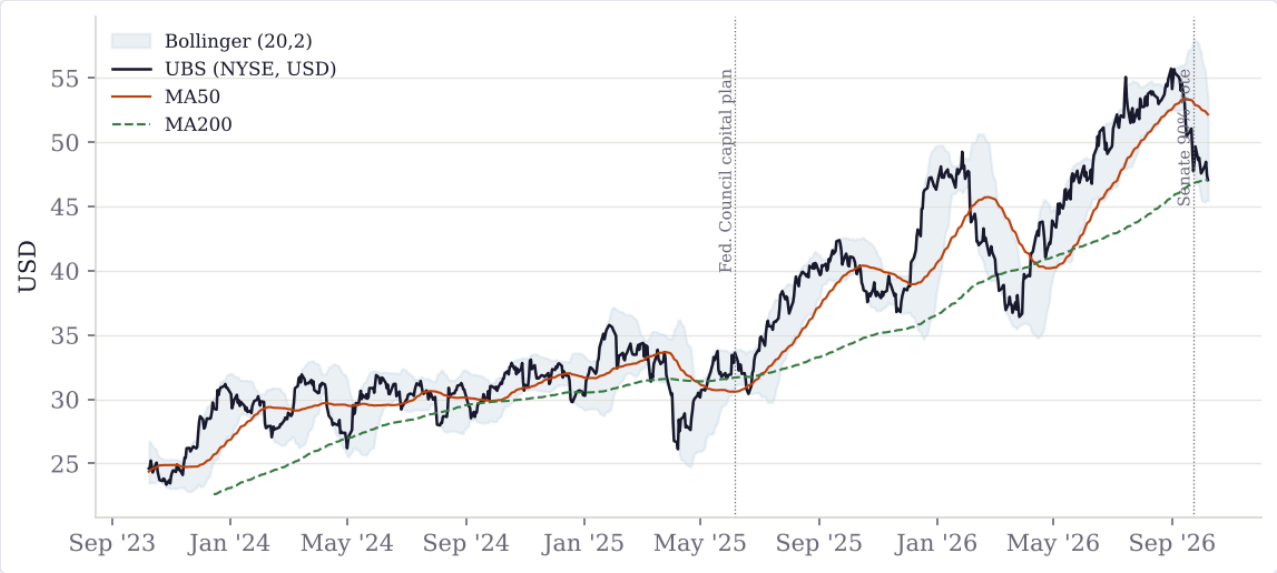

Fig. 10. Three-year UBS ADR price with MA50/MA200 and Bollinger bands; vertical markers show the Federal Council capital plan (Jun 2025) and the Council of States 90% vote (23 Sep 2026).

Indicator	Reading
MA50 / MA200	$52.16 / $47.06. Golden-cross regime intact, but price is testing the MA200.
RSI(14)	32.8 (approaching oversold)
Bollinger %B	20% (lower $45.46, upper $53.42)
52-week range	$36.41–$55.72 (-15.5% off high)
Performance	YTD +1.6% · 1-year +15.7%
Realised vol (90d, ann.)	24.7%

Table 12 — technical dashboard (8 Oct 2026 close).

The sell-off of roughly −15% began from the 8 Sep high, before the vote, and extended after Ermotti's cautious 3Q comments (22 Sep) and the 23 Sep Council of States decision. The stock is now sitting on its 200-day average. In the post-2023 uptrend that line has been breached only briefly (Apr 2025, early 2026), each time recovered within weeks. A sustained break after 3Q results would put the golden-cross regime at risk.

11 · Price forecast (1 / 3 / 6 months): ETS, ARIMA & VAR

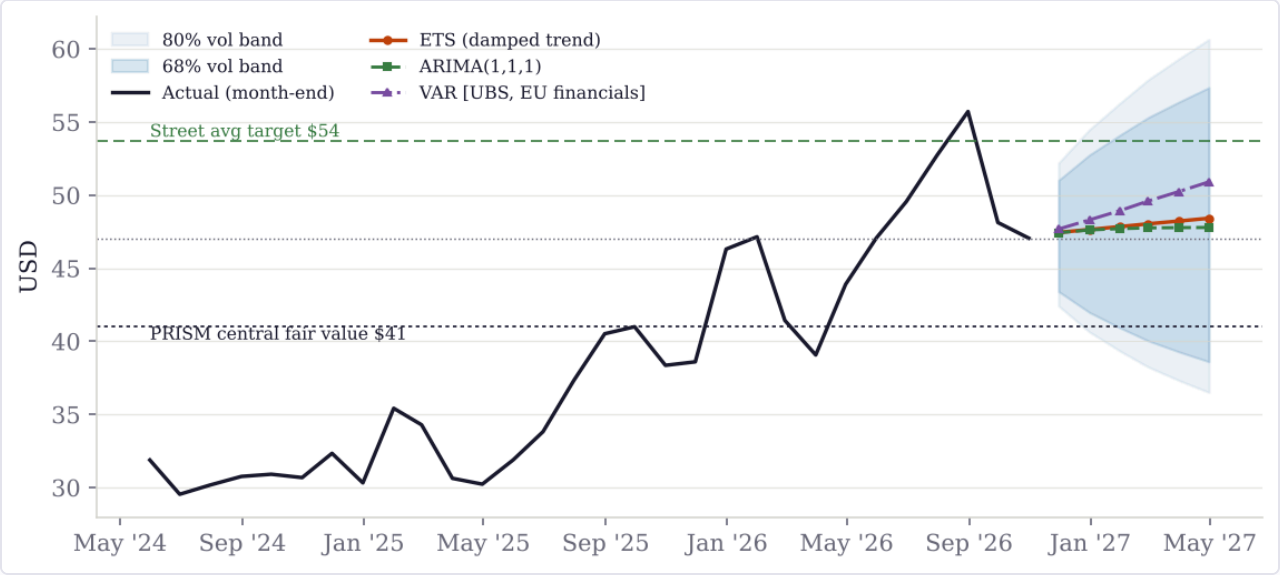

Fig. 11. Three models on 10 years of month-end prices: ETS (damped additive trend), ARIMA(1,1,1), and a VAR on monthly log-returns of [UBS, European financials ETF]. Shaded areas are 68% and 80% volatility bands. Horizontal guides mark the Street average target and the PRISM central fair value.

Horizon	ETS	ARIMA	VAR	68% vol band
1 month	$47	$47	$48	$43–$51
3 months	$48	$48	$49	$41–$54
6 months	$48	$48	$51	$39–$57

Table 13 — point forecasts and the 68% volatility band. Scenario anchors, not predictions.

Reading the three models. The price series is non-stationary (ADF p = 0.999), so all three models collapse toward a drifting random walk. ETS and ARIMA project only small drift ($48 and $48 at six months). The VAR's information criterion selects 0 lags, meaning European financials carry no exploitable lead over UBS, so its path ($51) is simply the sample-average drift of a strong 2023–26 run. The useful output is the band: a 68% range of $39–$57 at six months. That range brackets both the PRISM value ($41) and the Street target ($54), which is another way of saying the debate is about fundamentals, not momentum.

12 · Monte Carlo & events

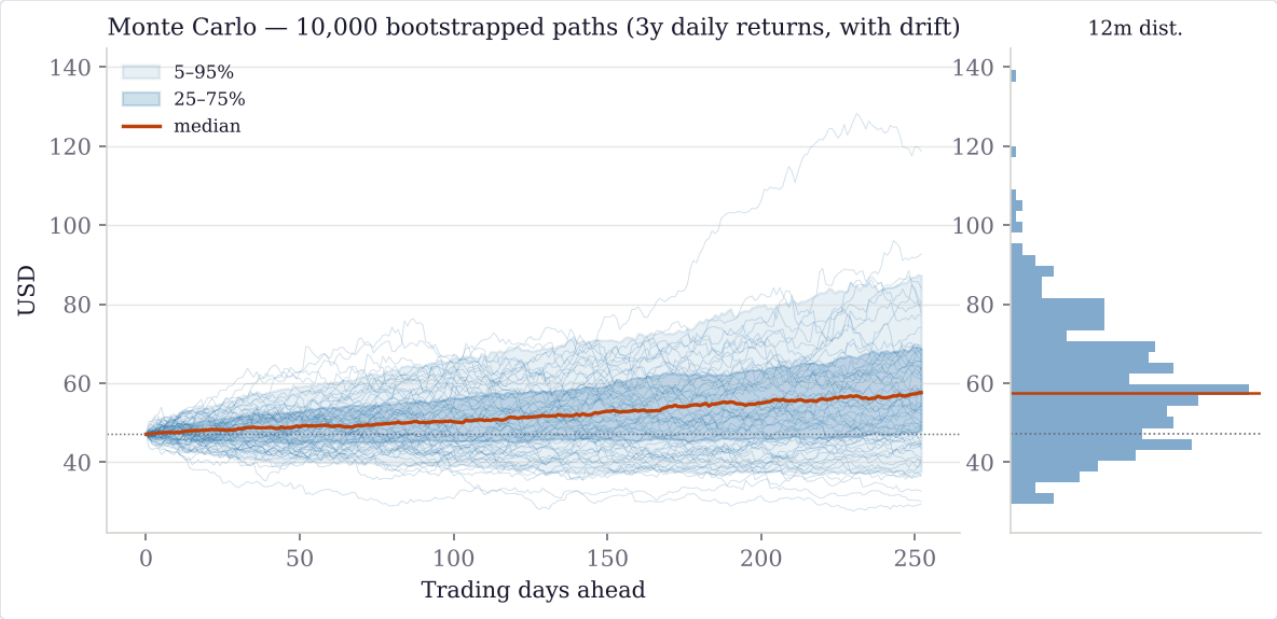

Fig. 12. 10,000 bootstrapped one-year paths resampled from the last three years of daily returns, with the 12-month terminal distribution.

Horizon	P5	P25	Median	P75	P95	P(>current)
6mo (with drift)	$38	$46	$53	$60	$72	71%
12mo (with drift)	$38	$49	$58	$70	$91	79%
6mo (driftless null)	$34	$41	$47	$54	$64	50%
12mo (driftless null)	$30	$39	$47	$56	$73	50%

Table 14 — Monte Carlo percentiles. The 'with drift' rows embed the strong 2023–26 return history; the driftless null removes it and is the more neutral base.

Beyond the smooth simulation, UBS's history is punctuated by discrete shocks. The chart isolates the **largest single-day moves of the past 10 years** (one per 15-day window, so the COVID cluster counts once) and shows where today's $47 would land if each recurred.

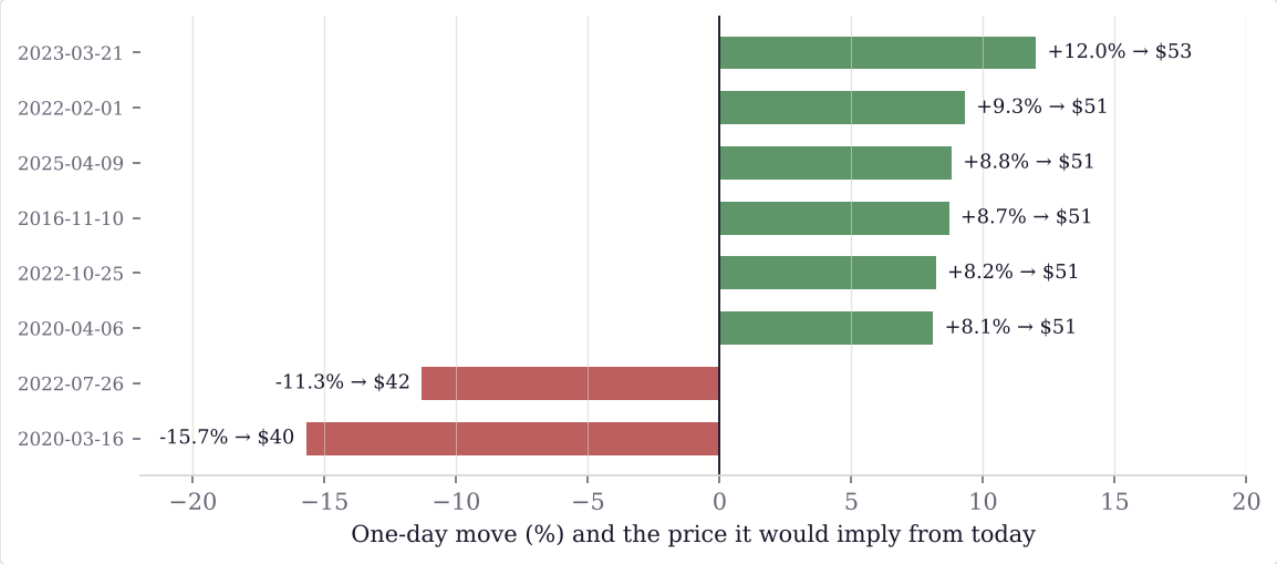

Fig. 13. UBS's largest single-day moves (NYSE ADR, 10 years) and the price each would imply from today.

Date	1-day move	Likely catalyst	If repeated from $47
2020-03-16	-15.7%	COVID-19 crash — global 'Black Monday' selloff, emergency Fed cut	$40
2022-07-26	-11.3%	2Q22 results — wealth-management revenue drop and cautious outlook	$42
2020-04-06	+8.1%	Pandemic relief rally as infection curves flatten	$51
2022-10-25	+8.2%	3Q22 results beat; buyback reaffirmed	$51
2016-11-10	+8.7%	Post-US-election bank rally (steeper curve, deregulation hopes)	$51
2025-04-09	+8.8%	US 90-day tariff pause — global relief rally	$51
2022-02-01	+9.3%	4Q21 results — record annual profit, larger buyback	$51
2023-03-21	+12.0%	Relief after the state-brokered Credit Suisse takeover (19 Mar) — 'deal of the century' re-rating	$53

Table 15 — the biggest UBS price events and their forward echo. Attributions are analyst-reconstructed from the move dates. Recurrence prices assume the identical one-day shock and are illustrative. UBS's worst days are macro (COVID) or earnings-quality shocks; its best days mix relief events (the CS rescue, the 2025 tariff pause) with results beats (4Q21, 3Q22). The Swiss capital votes have so far moved the stock in smaller steps spread over several days.

13 · Competitive landscape

Global wealth management is consolidating around scale players. Morgan Stanley and JPMorgan combine wealth with deposit franchises and earn 20%+ RoTE, which is why they trade at 3–3.5× tangible book. Julius Baer is the pure-play Swiss comparator at ~3.2×. UBS's edge is global breadth (Americas, Switzerland, EMEA and the fastest-growing Asian wealth pools) and a near-monopoly position in Swiss domestic banking after absorbing Credit Suisse. Its handicaps are a lower-margin US adviser model and the heaviest home-country capital regime of any G-SIB. In investment banking UBS has shrunk to a capital-light advisory and markets franchise, competing with US bulge-brackets whose capital requirements are falling (eSLR relief, the Basel III re-proposal). Deutsche Bank, BNP, Barclays and SocGen trade at ~0.7–0.8× tangible book on 11–15% RoTE. They are the reference point for what UBS's non-wealth businesses would be worth on their own. Strategic optionality is real but speculative. Press reports (Semafor, Sep 2026) of merger talks that would move UBS out of Switzerland, and Artisan's letter urging exactly that, act as a call option on a regime arbitrage. Management says it intends to stay.

14 · SWOT

STRENGTHS

- Largest global wealth manager (~USD 7.3tn invested assets); strong NNA (USD 72.9bn H1'26)
- Fortress balance sheet: leverage +2.9σ, LCR 177%, lowest cost of risk and NPLs in the peer set
- CS integration nearly complete: USD 12.6bn of ~13.5bn saves delivered
- Dominant Swiss franchise; deposit-rich, low-loss domestic lending

WEAKNESSES

- Cost/income 2.2–2.5σ worse than peers (72.7% vs 55% mean, H1'26)
- RoTE still below peers (13.9% vs 17.4% mean) despite a peer-median multiple
- Low NII intensity (0.5% of assets vs 1.1%), so less operating leverage to rates
- Below-peer dividend yield (2.3% vs 3.4% median); payout capped by Swiss capital rules

OPPORTUNITIES

- Exit-2028 ambition: ~18% RoCET1, ~67% cost/income
- US IHC capital release from 2027 (SCB, Basel re-proposal) to fund buybacks
- OCC charter: US deposits and lending to Americas wealth clients from 2H27
- A Swiss capital compromise (≤75%, or AT1-inclusive) would trigger a re-rating

THREATS

- 90–100% foreign-subsidiary CET1 rule: USD 16–20bn trapped capital, −2.3 to −2.7pp RoTE
- CS AT1 ruling (CHF 16.5bn) and exchange-ratio appraisal (CHF 7–35bn claims)
- Markets downturn hitting wealth fees and IB trading (high operating leverage on costs)
- US regulatory and political scrutiny (AML recidivism, Senate Nazi-era accounts probe)

15 · Pairs trades to watch

UBS's story is relative: the capital regime versus peers, and returns versus multiple. So market-neutral expressions are cleaner than an outright position (illustrative only, not recommendations). **Long Morgan Stanley / short UBS** pays for returns without the Swiss overhang. MS earns ~2× UBS's RoTE at ~2× the P/TBV, and the trade wins if Parliament lands at ≥90%. **Long UBS / short the European-financials ETF (EUFN)** isolates a capital-compromise call, best timed into the National Council vote in December. **Long UBS / short Julius Baer** is a wealth-franchise convergence trade: Baer trades at ~3.2× tangible book on a smaller, more volatile book (its 2023 Signa loss). It is a bet that UBS's RoTE closes the gap faster than Baer's multiple compresses. Pair sizes should respect UBS's ~25% realised volatility and binary political dates.

16 · Next steps

- Re-run the panel after 3Q26 results (28 Oct) and the National Council committee (26–27 Oct). Update the capital-scenario weights after the December plenary.
- Build a sum-of-the-parts using UBS's attributed tangible equity by division (GWM, P&C, AM, IB, NCL) instead of the 50% wealth-weight proxy in the mix-adjusted regression.
- Replace run-rate peer RoTE with consensus forward RoTE (paid feed) so the P/TBV regression is on a like-for-like forward basis.
- Model the US IHC capital release explicitly (SCB path, Basel re-proposal) as an offset to the Swiss foreign-participation deduction.
- Track the Swiss Federal Supreme Court AT1 docket and the Zurich Commercial Court expert report. Add a probability-weighted litigation charge to the fair value.
- Swap realised-vol bands for options-implied volatility around 28 Oct and the December vote; extend multiples history to 10 years with a paid fundamentals feed.

ADDENDUM — FINANCIAL STATEMENT ANALYSIS & HEALTH CHECK (FY2022–FY2025)

This addendum applies the **finance:financial-statements** workflow to UBS's four most recent annual reports: statements in multi-column format, year-over-year dollar and percentage variance, scaled materiality thresholds, driver decomposition of material variances, and a key-metrics summary. The skill's corporate template (COGS, gross margin) does not fit a bank, so the statements are restated in IFRS bank presentation. Revenue is net interest income plus non-interest income, expenses are by nature, and liabilities are grouped by funding type. Figures are from the standardised yfinance feed of UBS's IFRS accounts (USD bn); customer deposits and the regulatory ratios come from UBS filings. FY2022 is UBS standalone, and FY2023 includes Credit Suisse from 12 Jun 2023.

Verdict: financially sound and improving. The four-year statements show a bank that absorbed a balance sheet half its own size without weakening its solvency or liquidity. CET1 held at 14.2–14.4%, equity/assets rose from 5.0% to 5.6%, LCR stayed above 160% and credit losses stayed negligible. Earnings quality is recovering fast: normalised net income went USD 1.7bn → 6.3bn → 9.9bn (FY23–FY25), and the statement-basis cost/income ratio fell from 85% to 72%. The two weak spots are **cost efficiency** (still the worst in the peer group) and a **FY2025 profit flattered by a 12% effective tax rate**. The material risks to UBS's financial health are regulatory and legal (Sections 7–8), not balance-sheet risks.

Dimension	Rating	Evidence
Earnings power	Amber → Green	Net profit of USD 7.6bn (FY22 standalone), USD 5.1bn (FY24) and USD 7.8bn (FY25), with H1'26 at USD 5.8bn. Normalised income (ex-unusual items) has risen every year since FY23: USD 1.7bn → 6.3bn → 9.9bn. Revenue grew 4% in FY25, and NII 9%.
Cost efficiency	Red → Amber	Reported cost/income of 95% (FY23) → 84.8% → 81.1% → 72.7% (H1'26), still ~17pp above the peer mean. Personnel costs are 54% of revenue. Gross saves of USD 12.6bn are delivered, but the wealth model keeps structural costs high.
Capital adequacy	Green (policy risk)	CET1 has held at 14.2–14.4% through the acquisition, and equity/assets rose from 5.0% to 5.6%. Goodwill is only 7.7% of equity (a negative-goodwill deal). The risk is regulatory: the proposed Swiss rule would lift the required level by ~3pp.
Liquidity & funding	Green	LCR has run at 164–216% and NSFR at 116–125%. Cash and central-bank balances fell from USD 317bn to 211bn as excess merger liquidity was deployed. The loan-to-deposit ratio rose from 74% to 83%, still well funded. Long-term debt fell USD 36bn in FY24 as CS bonds matured or were repaid.
Asset quality	Green	Cost of risk ran 1–19bp and NPLs ~1%. The book is Lombard and Swiss mortgages; litigation provisions are falling (USD 3.6bn → 2.2bn → 1.96bn). The legal tails sit off balance sheet.
Cash generation & shareholder returns	Amber → Green	Bank operating cash flow is noisy (USD 86bn in FY23, USD 3bn in FY24, USD 22bn in FY25) because it is driven by client balances. Cash returned to shareholders went from USD 7.7bn (FY22) to 4.5bn (FY23) to 5.2bn (FY24) to 8.0bn (FY25), back above pre-merger levels.
Balance-sheet complexity	Amber	Total assets grew from USD 1.10tn to 1.72tn (FY23) and then shrank to USD 1.57–1.62tn. Derivative liabilities are USD 156bn and long-term debt USD 302bn. Non-core & Legacy is being run down but still carries USD 1.35bn of litigation provisions.

Table 16 — financial health scorecard, FY2022–FY2025 (arrows show trajectory into H1'26).

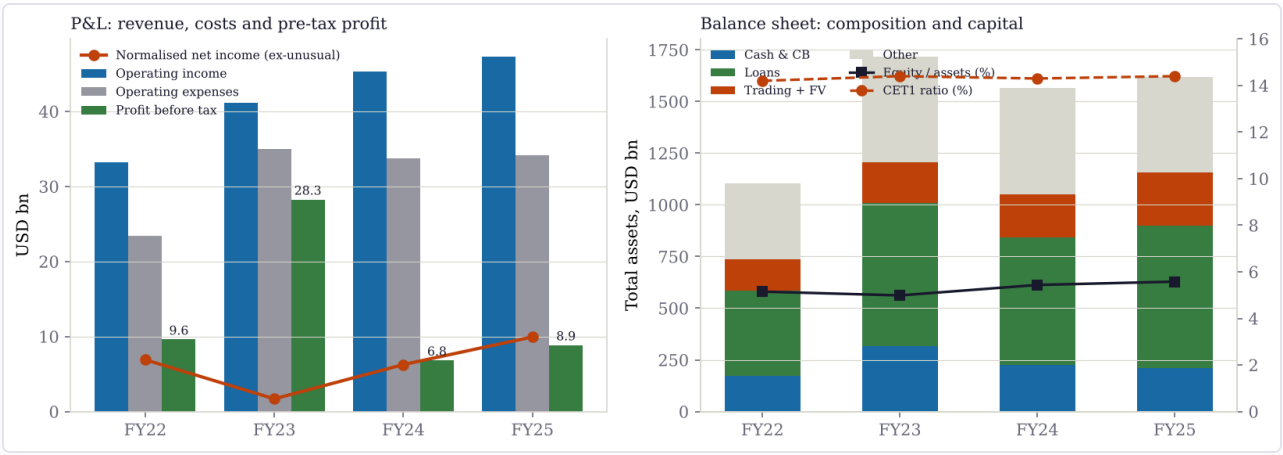

Fig. 14. Left: operating income, operating expenses and pre-tax profit (FY23 pre-tax includes the ~USD 27bn negative-goodwill gain), with normalised net income excluding unusual items (line). Right: asset composition with equity/assets and CET1 ratio.

A.1 · Income statement

Income statement (USD bn)	FY22	FY23	FY24	FY25	Δ FY23 $ / %	Δ FY24 $ / %	Δ FY25 $ / %

Non-controlling interests	(0.0)	(0.0)	(0.1)	(0.0)	+0.0 / +48%	-0.0 / -281%	+0.0 / +51%
Net profit attributable to shareholders	**7.6**	**27.4**	**5.1**	**7.8**	+19.7 / +259%	-22.3 / -81%	+2.7 / +53%

*Table 17 — UBS consolidated income statement, FY2022–FY2025 (IFRS, USD bn; expenses in parentheses). Shaded Δ cells exceed the materiality threshold (lines >USD 10bn: ≥0.5bn and ≥5%; 1–10bn: ≥0.25bn and ≥10%; <1bn: ≥0.1bn and ≥15%). *Derived balancing line.*

Read. Operating income grew 24% (FY23), 10% (FY24) and 4% (FY25), as the CS consolidation annualised and markets activity rose. Gross interest income and expense swing by USD 20bn+ with rates and the CS balance sheet, but **net** interest income is remarkably stable at USD 6.6–7.7bn. UBS is a fee business: NII is only ~16% of revenue. Operating expenses jumped USD 11.6bn in FY23 with the CS cost base and have since been held flat (USD 33.7–34.2bn) while revenue grew, which is the cost-save story in one line. FY2025 net profit (+53%) benefited from an effective tax

rate of 11.9%, against 24.6% in FY24. At a normal ~22–25% rate, FY25 net profit would be ~USD 6.6–6.9bn.

A.2 · Key metrics

Metric	FY22	FY23	FY24	FY25	Δ FY25
Revenue growth (%)	—	23.7	10.2	4.3	-593bp
NII share of revenue (%)	19.9	17.7	15.7	16.4	+71bp
Cost/income, statement basis (%)	70.3	85.2	74.4	72.3	-210bp

Total equity	**57.2**	**86.2**	**85.6**	**90.5**	+28.9 / +51%	-0.6 / -1%	+4.9 / +6%
Total liabilities & equity	**1,104.4**	**1,716.9**	**1,565.0**	**1,617.4**	+612.6 / +55%	-151.9 / -9%	+52.4 / +3%

*Table 19 — UBS consolidated balance sheet at 31 Dec (USD bn). Customer deposits are from UBS filings; *other lines are derived balancing items (they include derivative assets, trading liabilities and other categories that the standardised feed does not separate).*

Read. The FY23 step-up (+USD 613bn of assets, +USD 267bn of deposits, +USD 176bn of long-term debt) is the CS acquisition. FY24 shows deliberate de-risking: assets −USD 152bn, cash −USD 91bn as excess merger liquidity was deployed, and long-term debt −USD 37bn. FY25 asset growth is largely FX translation, because the weaker USD raised the dollar value of CHF loans and deposits, plus growth in trading and fair-value assets. Equity grew USD 28.7bn in FY23 (negative goodwill retained) and has since compounded despite USD 13bn of cash returned. Goodwill is small (USD 6.9bn, 7.7% of equity), so tangible book is high-quality.

A.4 · Cash flow statement

Cash flow statement (USD bn)	FY22	FY23	FY24	FY25	Δ FY23 $ / %	Δ FY24 $ / %	Δ FY25 $ / %
Net profit (incl. minorities)	7.7	27.4	5.1	7.8	+19.7 / +257%	-22.2 / -81%	+2.7 / +52%
Depreciation & amortisation	2.1	3.8	3.8	3.5	+1.7 / +82%	+0.0 / +1%	-0.3 / -7%
Change in operating assets & liabilities	18.2	90.1	(20.8)	23.7	+71.9 / +394%	-110.9 / -123%	+44.5 / +214%
Other non-cash items & taxes	(13.3)	(35.2)	15.1	(13.2)	-21.9 / -164%	+50.3 / +143%	-28.3 / -187%
Net cash from operating activities	**14.6**	**86.1**	**3.3**	**21.9**	+71.4 / +488%	-82.8 / -96%	+18.6 / +566%
Capital expenditure	(1.6)	(1.7)	(2.0)	(2.4)	-0.0 / -3%	-0.3 / -19%	-0.4 / -18%

Table 20 — UBS consolidated cash flow statement (indirect method, USD bn). For a bank, operating cash flow is dominated by balance-sheet movements in client and trading positions, so it is a weak earnings-quality signal; dividends and buybacks are the shareholder-relevant cash lines.

Read. For a bank, operating cash flow mostly reflects client and trading balance movements, so the USD 86bn (FY23) and USD 3bn (FY24) swings say little about earnings quality. The informative lines are financing and investing. FY23 investing inflows include ~USD 108bn of cash acquired with Credit Suisse. FY24–FY25 show net long-term debt reduction (USD 72bn and USD 23bn) as CS funding was rationalised. Cash returned to shareholders was USD 7.7bn, 4.5bn, 5.2bn and 8.0bn

(FY22–FY25), back above pre-merger levels in FY25. That is the line the Swiss capital reform would constrain.

A.5 · Material variance listing

Line item	Year	Δ $bn	Δ %	Dir.	Driver type	Explanation	Nature
Interest income	FY23	+22.3	+169%	Fav.	Volume + rate	CS balance sheet consolidated from Jun-23 plus higher USD rates; offset almost one-for-one in interest expense.	Non-recurring step-up
Interest income	FY25	-8.8	-20%	Unfav.	Rate	Lower average policy rates in 2025 and NCL run-down shrank gross interest flows; NII still rose 9%.	Trend
Interest expense	FY23	-21.7	-330%	Unfav.	Volume + rate	Funding cost of the acquired CS balance sheet and higher deposit/debt rates.	Non-recurring step-up
Interest expense	FY25	+9.4	+26%	Fav.	Rate	Deposit and wholesale funding costs fell faster than asset yields, so NII widened.	Trend (favourable)
Total operating income	FY23	+7.9	+24%	Fav.	Volume (acquisition)	Half a year of CS revenues added.	Structural
Total operating income	FY24	+4.2	+10%	Fav.	Volume	Full-year CS consolidation and stronger markets activity.	Structural
Personnel expenses	FY23	-7.2	-41%	Unfav.	Volume (acquisition)	CS headcount (~45k) absorbed; retention awards.	Being reversed by integration
Total operating expenses	FY23	-11.6	-50%	Unfav.	Volume (acquisition) + one-off	CS cost base plus integration expenses.	Being reversed by integration
Profit before tax	FY23	+18.7	+194%	Fav.	One-off	~USD 27.3bn negative goodwill on the CS acquisition.	Non-recurring
Profit before tax	FY24	-21.4	-76%	Unfav.	One-off reversal	No repeat of the badwill gain; integration costs still heavy.	Normalisation
Profit before tax	FY25	+2.0	+30%	Fav.	Cost saves + revenue	Gross cost saves and lower integration drag; revenue +4%.	Trend (favourable)
Net profit attributable to shareholders	FY23	+19.7	+259%	Fav.	One-off	Negative-goodwill gain.	Non-recurring

Net profit attributable to shareholders	FY24	-22.3	-81%	Unfav.	One-off reversal	Badwill not repeated.	Normalisation
Net profit attributable to shareholders	FY25	+2.7	+53%	Fav.	Cost saves + lower tax rate	PBT +30% and an effective tax rate of 12% (vs 25%).	Partly non-recurring (tax)
Cash & balances with central banks	FY24	-91.4	-29%	—	Liquidity normalisation	Excess post-merger liquidity redeployed; debt repaid.	Normalisation
Loans & advances (net)	FY23	+282.6	+69%	—	Acquisition	CS Swiss and wealth lending consolidated.	Structural
Loans & advances (net)	FY24	-77.2	-11%	—	Run-down + FX	NCL loan exits and weaker CHF translation.	Trend
Loans & advances (net)	FY25	+72.8	+12%	—	FX + growth	Weaker USD raised the USD value of CHF loans; Lombard growth.	Mostly FX
Total assets	FY23	+612.6	+55%	—	Acquisition	CS balance sheet added (~USD 0.6tn).	Structural
Total assets	FY24	-151.9	-9%	—	Run-down + FX	Non-core & Legacy exits; stronger USD.	Trend
Long-term debt & leases	FY23	+175.6	+107%	—	Acquisition	CS bonds assumed.	Structural
Long-term debt & leases	FY24	-37.2	-11%	—	Deleveraging	Net USD 72bn of long-term debt repaid as CS funding was rationalised.	Trend
Shareholders' equity	FY23	+28.7	+51%	—	One-off	Badwill retained in equity.	Structural
Net cash from operating activities	FY23	+71.4	+488%	—	Balance-sheet flows	Client and trading balance movements during integration.	Not an earnings signal
Net cash from operating activities	FY24	-82.8	-96%	—	Balance-sheet flows	Working-capital outflow (USD -21bn) as positions were unwound.	Not an earnings signal
Net cash from investing activities	FY23	+115.6	+929%	—	Acquisition	USD 108bn of cash acquired with CS.	Non-recurring
Dividends paid	FY25	-0.6	-27%	—	Capital return	DPS raised (FY24 USD 0.90 paid in 2025).	Trend
Share repurchases & treasury, net	FY25	-2.3	-77%	—	Capital return	Buybacks resumed at scale (USD 3bn programme).	Policy-dependent

Table 21 — material variance listing (threshold breaches with an identified driver; USD bn). Direction is shareholder-economic: lower expense = favourable.

A.6 · Follow-up questions for unexplained or one-off variances

- **Tax rate:** how much of the FY25 11.9% effective tax rate came from deferred-tax-asset recognition, and what is management's sustainable rate guidance for FY26–27?
- **Loan growth:** how much of the FY25 +USD 73bn in loans is CHF translation versus organic Lombard and mortgage growth? Answer from the 20-F constant-currency tables.
- **Derived 'other assets' (~USD 377bn):** split derivative assets from collateral and reverse-repo balances, to size counterparty exposure properly.
- **Integration tail:** what remains of integration expenses (~USD 0.75bn in H2'26), and what is the cost run-rate after the ~USD 13.5bn saves programme ends?
- **Funding:** what is the long-term debt maturity profile and TLAC issuance need if the Swiss foreign-participation rule raises the going-concern requirement?

APPENDIX A — FY2025 RATIO SNAPSHOT, EVERY BANK

Bank	RoTE	C/I	CET1	Lev.	LCR	NSFR	L/D	CoR bp	NPL	P/B	P/TBV
UBS ●	9.5	81.1	14.4	5.6	183	116	83	8	0.90	1.59	1.72
Deutsche Bank	10.3	64.4	14.2	4.6	144	119	69	36	3.20	0.82	0.90

Morgan Stanley	21.6	68.4	15.0	5.4	134	121	70	13	0.40	2.76	3.55
Goldman Sachs	16.0	64.4	14.3	5.2	123	116	47	-51	1.60	2.37	2.53
Julius Baer	20.6	71.3	17.4	4.9	261	—	63	50	2.88	1.77	2.79
JPMorgan	20.0	52.4	14.6	5.8	111	—	58	102	0.66	2.54	3.13

Table 22 — FY2025 year-end ratios by bank (reported in each bank's own filings; definitions differ at the margin, see Appendix B). RoTE, C/I, CET1, leverage, NPL in %; LCR, NSFR, L/D in %; cost of risk in bp.

APPENDIX B — METHOD & DATA NOTES

- **Peer set (n = 11):** European universal banks (DB, BNP, Barclays, HSBC, Santander, ING, Société Générale) and global wealth & IB (Morgan Stanley, Goldman Sachs, JPMorgan, Julius Baer). σ is the sample standard deviation

across peers excluding UBS.

- **Computed ratios (C)** come from yfinance annual statements in each bank's reporting currency. Market multiples use the last trading-day close of each year, converted to reporting currency (GBp→GBP; HSBC GBp→USD at year-end GBPUSD). Dividend yield = cash dividends paid / year-end market cap.
- **Reported ratios (R)** were collected from annual reports, Pillar 3 disclosures, 10-K/20-F and results releases. US banks: Standardised CET1, SLR as leverage, efficiency ratio as cost/income. UBS leverage = Swiss going-concern leverage ratio. Santander CET1 switches from fully-loaded to phased-in in FY25. Julius Baer cost/income and RoTE are its adjusted KPIs; ING RoTE is unavailable before FY24. Goldman's FY25 cost of risk is negative (Apple Card reserve release). H1'26 flow ratios are annualised.
- **UBS FY2023** includes Credit Suisse from 12 Jun 2023 and a ~USD 27.7bn negative-goodwill gain (later restated to USD 27.3bn). Underlying RoTE: FY22 12.8%, FY23 4.1%, FY24 8.5%, FY25 12.1%, H1'26 14.4%.
- **Fair-value inputs:** TBVPS $26.89 and BVPS $29.12 (30 Jun 2026, 3.062bn shares); TTM EPS $3.11; our FY26 EPS = H1'26 net profit (USD 5.84bn) × (1 + FY25 H2/H1 ratio 0.9) = USD 11.1bn. Mix-adjusted regression: P/TBV = -0.7 + 0.1344×RoTE + 0.627×wealth dummy, with UBS weight 0.5 ≈ GWM + AM share of underlying pre-tax profit.
- **Street targets** are converted at spot CHF/USD 1.2005. The Morningstar fair value could not be verified and is excluded.
- **Engine:** PRISM bank deep-dive methodology (bank_supplement.py / bank_report.py / deepdive.py), extended here with the ratio-panel, litigation, policy and Street modules. Data pulled 2026-10-09.

---

Provenance. PRISM bank deep-dive for UBS Group AG, extended edition (critical-ratio σ panel, litigation, government policy, Wall Street comparison). Valuation on the bank framework (P/E, P/B, P/TBV, RoTE). The P/TBV-vs-RoTE regression is the bank analog of Mauboussin's ROIC-vs-multiple point. Price engine: technicals, ETS/ARIMA/VAR, bootstrap Monte Carlo, events. Content hash 9590a5655f2242f6 · 2026-10-09. **Not investment advice.**
